District 6: Hector Rangel, Hector.Rangel@dot.ca.gov, 559-488-4151
HQ: Debbie Nozuka, Debbie.Nozuka@dot.ca.gov, 916-651-6012

Fresno Yosemite International Airport (FAT) is located about 100 miles south of Yosemite National Park and six miles northeast of the City of Fresno (California's fifth most populated city). It is a municipally-owned and operated, self-supporting enterprise (no general funds are used) within the Caltrans District 6 boundaries of Madera, Fresno, Tulare, Kings, and Kern counties. Serving the fertile Central San Joaquin Valley, FAT is poised as a prime agricultural export location.

OPERATIONS

Fresno Yosemite is open 24 hours a day, seven days a week.

FACILITIES AND SERVICES

- The Air Cargo Park is located at the north side of the airport on approximately 87 acres. It features two aircraft ramps and over 500,000 square feet of air cargo building space.
- FAT's two runways can accommodate most large aircraft fleets.
- It is one of a few California airports with a Category III (b) Instrument Landing System on its primary runway, which allows aircraft to land during low visibility days.

AIRPORT TRADE CHARACTERISTICS

- Over 99 percent of the cargo at FAT is handled by all-cargo carriers – FedEx, UPS, and Ameriflight.
- The FedEx regional hub processes up to 100,000 pounds (280,000 packages) of freight each day and has its own import clearance center.
- Freight is also transported in passenger aircraft holds by American Airlines/American Eagle,

Alaska Airlines, Allegiant Air, Delta, and United Airlines/United Express as belly cargo.

- Both Volaris and Aeromexico serve Guadalajara, Mexico, potentially creating more opportunities for international air cargo business.

SURFACE TRANSPORTATION NETWORK TRUCKING

Primary North-South Routes

- SR 99 and SR 41

Primary East-West Routes

- SR 180

SR 180 changes from a Surface Transportation Assistance Act (STAA) route to part of the California Legal Truck Network east of Minkler (post mile 77.5).

On an average daily basis, the volumes of 5+ axle trucks at interchanges with SR 99 run between 10,000 and 19,999.

Freight Planning Fact Sheet

SEAPORTS AND RAIL LINE ACCESS

- The two closest seaports, Port of Stockton and Port of Benicia, are over 130 miles away – too inconvenient for use by FAT.
- Both Class I rail lines, Union Pacific (UP) and BNSF Railway are nearby and a short line railroad runs at the southern border of the airport.

PLANNED PROJECTS

- The Airport Master Plan will soon be updated.
- Recent Federal Aviation Administration (FAA) grants allow FAT to make runway/apron improvements providing a benefit to both passenger and freight services.

OTHER AIRPORT FACTS

- FAT carried approximately 15,000 tons of cargo in 2015.
- A large airport-based solar farm supplies 74% of FAT's energy use.
- Within California's Central Valley, FAT is poised as a prime agricultural export location.

CONSTRAINTS AND ISSUES

- Noise abatement flight procedures are in place to maintain goodwill with surrounding communities.
- FAT also has a residential sound insulation program in place to mitigate noise impacts.

CALTRANS FOCUS AREAS

- Implement ways to alleviate highway bottlenecks along truck routes.
- Improve highway pavement conditions due to truck damage.
